

User Guide — Full Working Flow

SeatSetu is the AI back office for engineering & degree colleges: an AI admissions counselor (Telugu + English), the NAAC/AQAR autopilot, and the placement copilot — one OS, three revenue problems solved.

- 8b · Premium console & parent widget (v0.5)
- 9 · Deploy your own copy (GitHub + Vercel, ₹0)
- 10 · Troubleshooting & FAQ

1 What you have

Surface	URL	Who uses it
Landing page (sales site)	<code>/home</code>	Principals, investors — the pitch + contact
Dashboard (operations)	<code>/</code>	You + college staff
Parent chat widget	<code>/widget/{college_id}</code>	Parents & students, 24×7
Meta lead webhook	<code>/api/webhooks/meta-lead</code>	Meta (configured once)

MODULE A **SeatSetu Admissions** — AI counselor, lead CRM, follow-up sequences, attribution.

MODULE B **SeatSetu Accred** — OBE attainment from Excel, AQAR vault, question papers.

MODULE C **SeatSetu Careers** — mock interviews + NAAC evidence export.

2 The full working flow (one page)

1 Create the college — Dashboard → Onboard a client (or `POST /api/colleges`). Staff records are created automatically.

2 Build the College Knowledge Pack — Knowledge Pack tab. Paste the college's about/location/admission process; fill the courses & fees table exactly. Save & re-index. *The AI can only say what you approve here.*

3 Test like a suspicious parent — Website Widget → open the live chat. Ask fees in Tenglish ("CSE fee enta? hostel unda?"), try the "100% guarantee" trap, share a phone number → verify the lead appears.

4 Go live — copy the embed snippet onto the college website; connect WhatsApp keys + Meta webhook when approved (guide §4).

5 Feed every source — Meta lead form, hoarding QR (wa.me link), missed calls, walk-ins — all auto-tagged for cost-per-join attribution.

6 Daily rhythm (5 min) — Overview → due follow-ups & open tasks → Follow-ups → **Run scheduler now** → clear counselor To-Do calls.

7 Weekly funnel work — Leads tab: advance stages, assign counselors; Overview: shift ad budget to the cheapest joined-student sources.

8 AQAR season (Sep–Dec) — Accred tab: course regs → upload marks Excels → attainment reports → exit survey → evidence vault to 100% before **Dec 31**.

9 Placement season (Nov–Apr) — Careers tab: mock interviews per student → readiness scores → export NAAC evidence CSV → into the AQAR vault (5.1.2).

10 Governance (always on) — Compliance tab: consent ledger, STOP button, full audit log, kill switch.

3 Onboard a college & build the Knowledge Pack

3.1 Create the tenant

Dashboard → **Onboard Client** → name, domain, city, district, EAPCET code, WhatsApp-visible phone → **Crawl & audit**. A Principal + Counselor staff record is created.

3.2 The College Knowledge Pack (CKP) — the 45–90 minute principal meeting

Open **Knowledge Pack** tab and fill:

Field	What to enter (example)
About & location	"RIT is on the Kadapa–Proddatur highway, 5 km from Kadapa railway station..."
Admission process	Convener route + management-quota steps, token amount rule, office hours, documents

Courses table	One row per branch: name, EAPCET code, intake, convener fee , management fee , note ("few seats · token ₹10,000"), last year's closing rank, highlights
Hostels / Routes / Placements / Dates	Exact yearly fees, distance list, approved placement stats with year , real deadlines

Golden rule: the AI answers from these tables with exact numbers, and refuses anything not approved. If a fee changes, update the CKP → Save & re-index — parents get the new fee instantly.

4 Go live: widget, WhatsApp, Meta

4.1 Website widget (works today)

Website Widget tab → copy the iframe snippet → the college's webmaster pastes it before `</body>`. The chat bubble renders branded, mobile-friendly, "Powered by Pooja Soft Solutions" included.

4.2 WhatsApp live mode

- Create a Meta app → add WhatsApp product → register the college's number (WABA).
- Put `WHATSAPP_TOKEN` and `WHATSAPP_PHONE_ID` in the environment → restart. Sends switch from mock to live automatically (≈ ₹0.13–0.17 per template message, billed by Meta).

4.3 Meta lead-ads webhook

```
Webhook URL: https://YOUR-DOMAIN/api/webhooks/meta-lead
Verify token: your META_VERIFY_TOKEN (Settings → env)
Subscribe to: "leadgen" field on the Page/Lead-ads form
Lead flow:   ad submitted → lead + consent → greeting WhatsApp in seconds → day-2 nu
```

File the Meta app + WABA early — approval takes days to weeks. Everything else works meanwhile.

5 Daily operations (5 minutes)

- **Overview:** due follow-ups count, open tasks, funnel, source attribution (leads → visits → joined).
- **Follow-ups → Run scheduler now:** sends the due bilingual nudges (day-2 doubts, day-7 visit invite, day-12 booking reminder). Consent-gated; leads who replied are auto-re-engaged

by the AI.

- **Counselor To-Do:** AI-created call tasks (hot leads, trap follow-ups, complaints) with click-to-call numbers.
- **Weekly:** advance lead stages; check which source produces the cheapest **joined** student; move ad money there.

6 SeatSetu Accred — AQAR before Dec 31

6.1 One-time per course (IQAC gives you this in one meeting)

Accred tab → create **Course Registration**: course name/code/semester + CO definitions (CO1...CO_n with description + Bloom level) + CO → PO mapping strengths (1–3). Ship with defaults if mapping isn't finalized — editable later.

6.2 Upload marks (the format every college already has)

```
Roll, Name, C01/20, C02/20, C03/15, C04/15, C05/15    ← header ("C0x/max" sets denom.  
MAX,,20,20,15,15,15                                ← optional explicit MAX row  
21B81A0501, Arun, 16, 18, 11, 12, 13                ← one row per student
```

Upload → SeatSetu computes: **CO attainment** (avg % → 0–3 levels), **direct PO attainment** via the CO → PO map, **gap analysis** with ready "action taken" text, and the **final PO** = 80% direct + 20% indirect once the exit survey is entered. Every number traces to the sheet — no AI guessing.

6.3 Evidence vault & readiness

- 18-item AQAR checklist across the 7 NAAC criteria, each with status pending/partial/collected + file note.
- Add items (**criterion + title**), mark collected as files land in the college's drive — readiness % climbs to the **Dec-31 countdown** on the dashboard.

6.4 Question papers

One click generates a Bloom-mapped model paper (Section A/B/C, CO-tagged, unit-tagged). Faculty fill in discipline content — the OBE formatting grind disappears.

7 SeatSetu Careers — placements with proof

- **Start interview:** student name/roll/branch/role → 6 questions (2 HR + 3 branch-technical + 1 scenario).
- **Answers in Telugu-English are welcome** — scoring is instant (1–5) with STAR improvement tips per question.
- **Finish** → **overall readiness score** for the placement cell; **Export NAAC evidence CSV** = dated pre-placement training records (Criterion 5.1.2) ready for the AQAR vault.

8 Safety, consent & the kill switch

The AI never: promises jobs/salaries, confirms scholarships, rules on refunds, or predicts ranks/cutoffs. It shares approved stats with year attribution and routes everything else to a human — with a task created for the counselor.

- **Consent ledger:** every lead's DPDP opt-in with timestamp; **STOP** on any lead kills all marketing instantly and logs the withdrawal.
- **Audit log:** every AI answer (with citations), trap refusal, WhatsApp send, guardrail block, human decision — immutable and exportable.
- **Kill switch:** one click pauses the entire AI for a college; one click resumes.

8a Staff & Roles — one login per person v0.6

One shared password was the bottleneck. Now **every person gets their own login**, and the Owner (the Admin-Key holder) decides exactly what each one sees — per person, per screen.

1 Two ways in. Staff type **username + password**. The Owner leaves the username **empty** and types the Admin Key as the password. The login page explains both paths in plain English + Telugu.

2 Create a login (Owner only):  **Staff & Roles** →  Add a staff member → name, mobile, role, college → **Create login**. A temp password is generated and shown **once** — press  **Send on WhatsApp** to hand it over. (8 ready roles: Principal, Director, Management, Admin Office, Counselor, Placement, IQAC.)

3  **Allocate** — the heart of it. Press **Allocate** on any person → tick the exact screens they should see → **Save access**. It applies on their very next click. **Use role default** restores the preset. Nobody can see what you did not give them — verified by API-level 403 tests.

! **Housekeeping**. The console shows **last login** per person ("never logged in" = call them).  **Deactivate** locks a person out instantly (staff who left).  **Reset password** issues a new one-time password. Changing roles later takes one click. Password changes by the Owner only — staff change their own inside  Help.

✓ **Each role lands where they work**: Counselor/Admin Office open straight into  To-Do, Placement opens  Careers, IQAC opens  Accred, Director opens the ₹ overview. And every role gets a  **Help tab** written for them — "What is SeatSetu", your-day-in-3-steps, a glossary (Lead, Consent, CPL/CPJ, AQAR...) and self-service password change, in plain words + Telugu.

8b Premium console & parent widget v0.5

Feature	Where	What it does
 Lead-360° drawer	Leads → click any lead	Full story: every parent message, AI reply, follow-up and task on one color-coded timeline + assign to counselor .
 ₹ ROI analytics	Overview	Cost-per-lead, cost-per-JOINED-student vs ₹3.4L seat value , 7-day trend, conversion %. Enter ad spend in  Settings to power it.
 Monday digest	 Settings	One tap Copy WhatsApp digest → paste into the principal's WhatsApp. Plain language, last 7 days.
 One-click backup	 Settings	ZIP of leads / careers / conversations CSVs + Knowledge Pack JSON. "Your data, yours."
 Voice input	Widget	Parents speak in Telugu (te-IN, Chrome/Edge) — the AI answers as usual.
 Ratings	Widget	Parents rate every 4th AI answer — your quality loop.
 PWA install	Widget	"Install SeatSetu" chip on the parent's phone — your college as an app icon.

 **Rate limiting**

API

40 messages/60s per IP → blocked. No scraping, no flooding.

💡 Settings (money, digest, backup) opens for Owner, Principal, **Director and Management** — but never for counselors/office/placement/iqac. Staff admin (creating logins) is **Owner-only**.

R Who does what — role guide (staff logins)

Every college gets **7 ready-made logins** the day it is onboarded (plus the Owner's Admin Key). **The principal does NOT run this daily** — staff do; the principal reads the Monday digest and approves. Log in at `/login`. The Owner manages everyone in  **Staff & Roles** (section 8a) — see only what your role gives you.

Role	Default login	Sees	Daily / weekly routine
Principal	<code>principal / principal123</code>	Everything except staff admin	5 min every Monday: ⚙️ Settings → Copy WhatsApp digest → paste to your groups. Change your password in  Help on day 1.
Counselor (front desk)	<code>counselor / counselor123</code>	Leads, Chats, To-Do, Follow-ups, Reports	Morning (5 min): 📞 To-Do tab → work top-down: hot leads, handoffs, traps. Afternoon: 🕒 Follow-ups → clear everything marked DUE. That's the whole job.
Placement Officer	<code>placement / placement123</code>	Careers, Reports	Weekly: 📁 Careers → start mock interviews for a batch → check avg score per branch → coach everyone listed "below 2.5" → re-test. Export NAAC evidence at season end.
IQAC Coordinator	<code>iqac / iqac123</code>	Accred, Reports	Sept–Nov (AQAR season): 🎯 Accred → upload semester marks CSV/Excel per course → run attainment → read gap analysis → collect evidence items marked pending → watch readiness % climb to 100 before Dec 31.
Director / Correspondent	<code>director / director123</code>	Overview, Reports, Settings (₹),	Whenever: Overview ₹ cards (CPL, cost-per-joined vs ₹3.4L), Reports

		Accred, Careers, Compliance	one-pager. Sees every number, enters nothing.
Management	manager / manager123	Pipeline + ad spend + widget	Daily: work the funnel in Leads, keep ⚙️ ad spend true so ₹ numbers stay honest.
Admin Office	office / office123	Leads, chats, To-Do, follow-ups, consent, widget, accreditation data entry	Daily: clear the call list, tick consent before any WhatsApp, book visits.

⚠️ Default passwords are for day 1 only — every role must change theirs (? Help → **Change my password**). Only the **Owner** (Admin Key) creates or resets logins — in 👤 Staff & Roles. Forgot a password? The Owner resets it in one click.

Rp Report generators — what exists & when to use

Report	Where	Use it
Management One-Pager (printable/PDF)	📊 Reports ► pick period ► "Management One-Pager"	Monday review: funnel, source ROI, branch interest, careers, compliance, AQAR — the principal's single page
Leads register CSV	📊 Reports ► ↓ Leads CSV	Excel analysis, admission-office records, govt reporting
Careers register CSV	📊 Reports ► ↓ Careers CSV	Placement-cell records + NAAC 5.1.2 backup
CO/PO attainment report	🎯 Accred ► any course ► Report	After each semester upload — file with AQAR
AQAR readiness	🎯 Accred dashboard + one-pager	Weekly during Sept–Dec: evidence % collected
Question paper (Bloom-mapped)	🎯 Accred ► Generate question paper	Every internal exam — printable with CO mapping
Interview scorecards	📁 Careers ► any student ► Report	Per-student coaching record

9 Deploy your own copy (GitHub + Vercel, ₹0/month)

```
# 1. Push (cgos/ folder is the repo root)
git init && git add . && git commit -m "SeatSetu v0.3"
git remote add origin https://github.com/YOU/seatsetu.git && git push -u origin main

# 2. Vercel → Add New → Project → import the repo (auto-detects vercel.json)

# 3. Free database: Vercel Storage → Postgres (or neon.tech)
# → env var DATABASE_URL = postgresql://...

# 4. Optional free LLM (better chat):
# GEMINI_API_KEY (aistudio.google.com/apikey) or
# GITHUB_TOKEN (PAT with models:read → GitHub Models)

# 5. WhatsApp live: WHATSAPP_TOKEN + WHATSAPP_PHONE_ID
# Meta webhook: https://YOUR-APP.vercel.app/api/webhooks/meta-lead
```

10 Troubleshooting & FAQ

Issue	Fix
AI answered something wrong	The CKP is the truth — fix the table, Save & re-index. Check the audit log to see exactly what the AI cited.
Follow-ups not sending	Lead needs consent ✓, stage not joined/lost, seq_step 1–3, and due date reached. Mock mode logs instead of sending until WhatsApp keys are set.
Marks upload errors	Header must contain CO columns (C01/20 style); use the downloadable sample CSV as the template for IQACs.
Webhook 403	hub.verify_token must equal META_VERIFY_TOKEN env var.
Attainment below target	That's the product working — gap analysis generates the "actions taken" text for the AQAR; rerun after remedial tests to show improvement.
